

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

# COMBINATION TELEGRAPH CODE.

ARRANGED BY THOMAS PARKER.

---

ENTERED AT STATIONERS' HALL.

---

MANCHESTER:

PALMER & HOWE, PRINTERS, 73, 75, AND 77, PRINCESS STREET.

LONDON: SIMPKIN, MARSHALL, & Co., STATIONERS' HALL COURT.

1880.

*2578. j. d. A.*

## P R E F A C E.

---

In publishing the following Code for the use of Merchants and others, the Author has had in view three special objects:—**Economy, Simplicity, and Comprehensiveness.**

The 72 prices and 10 quantities given are such as have suited the Author's own requirements, but the scheme may be easily remodelled to suit any other exigencies.

The 4 shipments can of course be similarly dealt with.

---

## A D V A N T A G E S.

One of the Author's aims has been to confine his Cipher words entirely to Latin Verbs of the first and third conjugation, and consequently this Code can be used as supplementary to any or all others which do not introduce words of this particular class.

It includes: { **56** qualities, numbered consecutively,  
**72** prices,  
**10** quantities, or numbers of packages,  
**4** times of shipment or delivery,

and a telegram of **one word** offers or orders any one of the **56 qualities**, with any combination of the **10 quantities**, **72 prices**, and **4 shipments**.

It will thus be seen that a **total number of 161,280 essentially different telegrams, of one word only**, can be wired.

---

## E X P L A N A T I O N.

The Code consists of two parts. The Cipher meanings of the 720 stems in Part I. are, in consecutive order, the same as those of the 720 stems in Part II., but the meanings of the terminations differ in the two parts. Thus, in telegraphing, it must be remembered that

**The first 37 qualities are treated in Part I.**

**The last 19 „ „ in Part II.**

and that terminations in Part I must be used with stems in Part I. *only*; and that terminations in Part II. must be used with stems in Part II. *only*. Each list of terminations and stems is arranged alphabetically.

A key to each page of stems appears on the opposite page, and, for convenience of reference, the terminations with their meanings are printed on every corresponding page of stems.

---

## EXAMPLES.

Suppose the telegram "Recubo" is received. On looking in the list of stems in Part I., "Recub" is found, numbered 549, which, on reference to key on opposite page, is found to mean "80 Packages at  $7/5\frac{1}{2}$ ."

The remaining part of the word is "o," which on reference to list of terminations on the same page, is found to mean "No. 34, shipment in twelve weeks." Thus the word offers or orders, "80 Packages No. 34 quality at  $7/5\frac{1}{2}$ , shipment in twelve weeks."

---

Again, it is desired to offer out, "30 Packages at  $7/6$  of quality No. 10, shipment in four weeks." *Now quality No. 10 is among the first 37, and therefore we have to do with Part I.* From the key in Part I. we find "30 Packages at  $7/6$ " numbered 554, which, on reference to stem list="Refut," and from termination list on same page, "No. 10, shipment in four weeks"=ar. Therefore, the word to be wired is "Refutar."

---

N.B.—If the quality Number were 40 instead of 10, we should have had to do with Part II., and we should have got stem 1274=obrep—and termination=ebar. Therefore, the telegram would have been "Obrepebar."
